4

If the automatic internet connection failed, or if no connection has been detected during the system startup, a new screen will appear asking you whether you want to configure your connection now or later.
Keep in mind that for maintenance purposes or system updates, it is necessary to have an active internet connection.

5

If you've decided to configure your connection later, your system will automatically reboot.
If you want to configure it now, go to the next step.

6

From this screen, you can configure your internet connection. If you're using a Kylii Touch system, you can only setup an ethernet connection (using a RJ45 cable).
A configuration guide is available in the *User Manual* of your equipment *(at the Equipment Configuration section)*.
Once your connexion is set and checked, your system will automatically reboot.
